PC-672 Bicarb is a granulated floor treatment used to prevent slipping on production floors in meat, poultry, dairy and general processing plants. Due to its granulated form, PC-672 Bicarb is less dusting than traditional powdered floor treatments, dissolves slower on wet floor surfaces and offers better anti-slip properties. It contains sodium bicarbonate and cationic quaternary ammonia surfactant which makes it an effective odor control agent in moist environments.

DIRECTIONS FOR USE: Apply in thin layer on food plant flooring, either manually or through the use of a drop spreader. Application rate of 10 pounds per 3750 sq. ft. will deliver an effective level of odor control and prevents slipping of personnel on production floor.
