Dear Ms. Tungland:

RE: PAC-610 Neutral pH Sanitizer and Deodorizer

This is in reference to your email of April 15, 2015 wherein you provided information on the subject product on behalf of your customer Packers Chemical (Canada) Inc. and which you are seeking its acceptability to be used as a neutral pH sanitizer and deodorizer in food processing establishments.

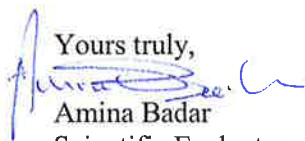

Based on the information submitted, we can advise that we see no reason to object to the composition and use of the subject product as a sanitizer on food contact equipment or surfaces in food plants without a potable water rinse provided that:

- a) The food contact surfaces have been previously cleaned and rinsed with potable water prior to sanitizing;
- b) The use concentration of the product will not exceed 200 ppm of active quaternary ammonium compounds; and
- c) The surfaces are hard and non-porous in nature and are thoroughly drained prior to re-use

For concentrations that exceed 200ppm on quaternary ammonium compound, the surfaces that go in direct contact with food should be rinsed with potable water prior to treatment.

The label of the product is deemed acceptable for its use in food plants.

We trust that the foregoing will be of use to you.

Yours truly,
Amina Badar
